Proudly associated with some of the world’s most renowned high-rise buildings, Polypipe has an unrivalled history of supplying to the most prestigious developments in the modern age.

As buildings grow ever taller, the industry is presented with unique construction challenges. These sorts of issues are second nature to our experts, who are on-hand to research and develop solutions that meet both budget and building constraints.
Terrain Siphonic & Gravity Rainwater Systems
Designed for large roof areas through to small terraces or balconies, Terrain’s extensive range of rainwater systems are designed to address the increasing need to manage storm events and promote roof-level rainwater harvesting.

Terrain Pleura Systems
The Terrain Pleura range of air balancing valves provide point of need ventilation to the internal drainage pipework system to protect trap water seals and can be utilised to significantly reduce pipework material requirements.

Terrain Above Ground Drainage Systems
A uniquely engineered PVC-U solvent weld gravity pipework system with a wide range of associated fittings to ensure a ‘fit and forget’ internal drainage solution.

Terrain Traps & WC Pan Connectors
Complementing the Terrain drainage pipework system, a full range of Traps & WC Pan connectors enable easy connection to sanitary appliances.

Terrain Below Ground Drainage Systems
Terrain’s PVC-U push-fit gravity pipework systems offer flexibility and ease of installation. A comprehensive range of polypropylene gullies, p-traps and inspection chambers, Terrain's enduring range of installation systems

Terrain Below Ground Drainage Systems
Permavoid’s water management system provides an ideal interface for attenuation systems, with a focus on providing structural support to areas requiring reinforcement.

Effast Pressure Pipe Systems
Effast PVC is a reliable lightweight solvent weld high performance pipework system. It is ideal for water distribution networks, swimming pools, irrigation systems and water supply systems.

Polystorm Stormwater Systems
The Polystorm range of products is a sustainable storm water management system comprising of incredibly strong individual cells with a 95% void ratio. The structure can receive rainwater collected from the roof gutter system or surface drains and either release the water within set discharge limits (attenuation) or, where soil conditions allow, be wrapped in a permeable geotextile and slowly release the water back into the surrounding soil and natural water sources (soakaway).

Permavoid Shallow Storage Systems
The Permavoid water management system provides ideal first stage source control solution that can be easily integrated into an overall SUDS design. It consists of lightweight, 85/150mm thick modular cells that can be interlocked to create a load supporting structural raft across a trafficked area or landscaped roof garden.

PolyPlumb Hot & Cold Systems
Polybutene pipe is ideal for hot & cold water distribution networks, offering durability and long term performance. PolyPlumb has natural flexibility and a fast push-fit joining system for efficient installations.

Effast Pressure Pipe Systems
Effast PVC is a reliable lightweight solvent weld high performance pipework system. It is ideal for water distribution networks, swimming pools, irrigation systems and water supply systems.
